COVER FOR PE WATER UTILITY VALVE BOX H270

Standard: EN 124-2:2015
Material: Ductile (Sferoidal) Cast Iron EN-GJS-500-7
Surface Coating: Bituminous Coating
Height: 270 mm

Colour

APPLICATIONS

The cover, manufactured from high-strength ductile cast iron EN-GJS-500-7, is designed for installation on polyethene water main surface box bodies used in water supply networks. It protects the shut-off valves housed within the surface box while providing safe and convenient access for operation, inspection, maintenance, and repair. Designed for a 150 mm-high polyethene body, the cover effectively protects the interior from mechanical damage, dirt, moisture, and debris. Thanks to the use of ductile cast iron, it offers excellent strength, corrosion resistance, and long-term durability in demanding operating conditions.
