COVER FOR PE WATER UTILITY VALVE BOX H150

Standard: EN 124-2:2015
Material: Ductile (Sferoidal) Cast Iron EN-GJS-500-7
Surface Coating: Bituminous Coating
Height: 150 mm

Colour

APPLICATIONS

The cover, manufactured from high-strength ductile cast iron EN-GJS-500-7, is designed for installation on polyethene bodies of water main surface boxes used in water supply networks. It protects shut-off valves housed within the surface box while providing safe and convenient access for operation, inspection, maintenance, and repair of the water supply system. Designed to fit a 150 mm-high polyethene surface box body, the cover effectively protects the interior against mechanical damage, dirt, moisture, and debris. The use of ductile cast iron ensures excellent mechanical strength, corrosion resistance, and long-term durability under demanding environmental conditions.
